

Diagnostic Workflow Assistant

Static simulated-AI portfolio demo for Sales Engineer / Solutions Consultant roles

This demo shows how Alan C. De Guzman translates real dealership diagnostic experience into a product-style SaaS workflow for automotive SaaS, fleet, telematics, diagnostics, EV service, warranty, roadside, and service operations teams.

What The Demo Does

- Takes customer complaint, DTCs, scan observations, operating conditions, urgency, and service environment.
- Renders a command-center dashboard with case summary, live signal snapshot, validation steps, root-cause ranking, buyer impact, and demo script.
- Includes fictional sanitized MINI EV high-voltage and Honda emissions/readiness cases, plus deterministic fallback logic for custom intake.
- Adds search/highlight, full workflow view, copyable executive brief, copyable Sales Engineer talk track, and 5/15/30 minute demo modes.

Business Value

Fleet / Telematics	Turns diagnostic data into triage, downtime decisions, maintenance workflow, clearer escalation, and proof-of-value language.
Dealer / Shop SaaS	Improves technician-to-advisor handoffs, customer explanations, documentation quality, and workflow consistency.
Roadside / Warranty	Structures incomplete information, urgency, operational handoffs, assumptions, and implementation planning.

30-Second Demo Intro

"This portfolio demo shows how I think as a technician moving into Sales Engineering. A vehicle concern usually starts messy: customer complaint, DTCs, scan data, conditions, safety constraints, and buyer impact. The assistant turns that into a command-center workflow a technician, advisor, fleet manager, support team, or executive buyer can act on. It is not replacing technician judgment; it is making the workflow clearer, measurable, and easier to communicate."

Honest Boundaries

- The app uses fictional sanitized sample cases.
- It is a portfolio workflow demo, not a production diagnostic tool.
- Safety decisions and repairs require qualified technician validation and OEM procedures.
- Alan's strongest value is domain expertise plus software/AI workflow fluency.
